## Composting technology that is efficient and creates a high quality product

**Biosolids Mixing:** Biosolids are blended with woodwaste in a 1:1 weight ratio using a Supreme EnviroProcessor. Mix time is 2 minutes. Material is discharged inside the building.

**Active Composting:** The blended material is placed in the front of one of four aerated channels, is composted for 21 days, then exits the channel at the other end. A RotoKing compost turner moves the product through the channels.

**Screening:** Overs are returned as bulking agent, fines are further cured for marketing.
